

TILE LEVELLING SYSTEM

2 Part System - **A** Clip and **B** Wedge

The Tile Levelling System was developed out of a need to diminish costly mistakes due to unlevelled tiles causing lippage in high end installations. It is the perfect system to use with tile plank and large format rectified porcelain, marble and stone and the flat bed design is ideal for wall tile installations. This time saving system adjusts the height of the tiles and evenly holds their edges throughout the setting process. It is the most cost effective installation method on the market to eliminate lippage.

LASH^{XL}

LEVEL ALIGN SPACE HOLD

LEVEL & ALIGN

Automatically aligns the tiles, ensuring tile surface is level

SPACE

Evenly spaces tiles to prevent joint variation

HOLD

Wedges hold tiles at even height until the adhesive sets

ELIMINATES UNEVEN TILES - NO MORE LIPPAGE

A
CLIPS

GROUT LINE
2mm

DESIGN
Notches on side of the clip allows mortar to dispense evenly to eliminate potential voids

LEVEL
Flat base maximises adhesive coverage and ensures tile surface is lippage free

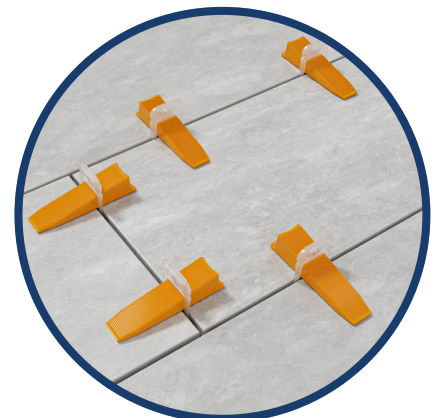

SIZES
Two sizes are available:
3-12mm and 12-20mm

B
WEDGES

HOLD
Wide wedge design holds tiles securely while mortar dries

COST EFFECTIVE
Reusable wide wedge

EASY TO INSTALL AND REMOVE

LASH^{XL}

LEVEL ALIGN SPACE HOLD

STEP 1
Apply adhesive according to manufacturer's instructions. Vitrex LASHXL Tile Levelling System is recommended when using at least a 6mm x 6mm trowel depending on tile size to apply the adhesive. Slide two clips under the tile approx. 50mm from each end of the tile.

STEP 2
Position the tiles, aligning the sides and pushing them tightly against the clip. Slide a reusable wedge into each clip and tighten until tiles are snug against the bottom of the wedge.

Lash Pliers also available.

STEP 3
Let the adhesive dry as required by manufacturer's instructions. Simply kick the side of clips in the direction of the grout joints to snap them off or use a non-marking, rubber mallet. Keep reusable wedges for your next project.

STEP 4 Be sure to follow all substrate preparation procedures as directed by the adhesive manufacturer before starting installation. Back buttering/applying adhesive directly to tile back is always recommended for larger format tiles. The Vitrex LASHXL Tile Levelling System should not be used as a substitute for any levelling or substrate preparation products.

PRODUCTS

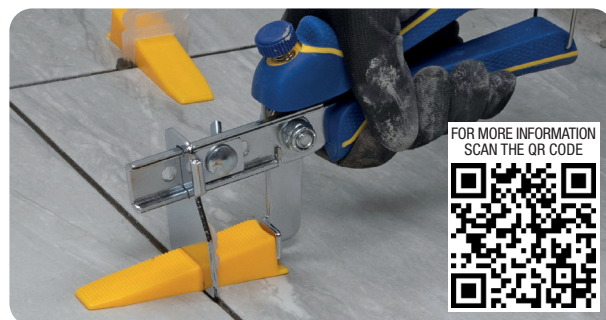

Type	Part Number	Quantity
A and B	LASHXL150	150 Clips and Wedges - 3-12mm
A	LASHXLCL0012	100 Clips - 3-12mm
A	LASHXLCL1220	100 Clips - 12-20mm
B	LASHXLWD100	100 Wedges

LASH PLIERS

For faster installation using the correct force.

VERSATILE

Removable jaw protective caps allow pliers to accommodate wide style tile levelling systems.
