

SAFESTCUT USER MANUAL

Remove the blade guard

Press the bladed corner of the SafestCut into the sealant at a shallow angle until the unit is against both surfaces

Push the SafestCut along the sealant that is to be removed

The SafestCut can be used flat or upright, which is useful when removing sealant from behind taps

Repeat process 2 to 4

The SafestCut can be used in the opposite direction if required for a cleaner sealant removal

There may still be a little sealant residue, which can be covered with new sealant
